## On the Subject of Not Symbolic Password

Hey, What's your Netflix password? Oh, it's Copyright Lambda Trident Euro Six Lightning, shifted right. Thanks... wait, shifted right?

The six cells represent six positions in the grid below. Pressing an arrow button will move all cells in that row or column once in that direction. Set the cells in such a way that the position on the module matches a <u>position</u> in the grid below.

For clarification, shifting all cells on the module in the same direction any given amount will always form a valid position in the grid, so any configuration that may appear valid may not be.

Succesfully doing so three times will disarm the module.
